Summary

Backend developer with a strong foundation in Java and Spring Boot, focused on building event-driven, production-grade systems. Experienced in integrating payment gateways, async messaging, and AI-powered APIs into real-world applications. Solved **100+ problems** on LeetCode with consistent focus on data structures and algorithms.

Education

Institute of Engineering and Management (IEM)

B.Tech in Computer Science & Business Systems (CSBS) | CGPA: **8.20**

Kolkata, West Bengal

Expected May 2027

Technical Skills

Languages	Java 17, Python, SQL, JavaScript
Backend	Spring Boot 3, Spring Security, Spring Data JPA, Hibernate, RESTful APIs, Kafka
AI / Pay	Groq API (Llama 3.1), Razorpay Payment Gateway, OpenAPI / Swagger
Databases	PostgreSQL, MySQL, MongoDB, Redis
DevOps	Docker, Docker Compose, Flyway Migrations, Git, GitHub, Maven
Tools	Postman, IntelliJ IDEA, Linux

Projects

FreelanceFlow — SaaS Invoicing & Payments Backend

[GitHub ↗](#)

Java 17, Spring Boot 3, PostgreSQL, Kafka, Redis, Groq AI, Razorpay, Docker

Feb 2026 – Ongoing

- Engineered a production-grade billing engine for Indian freelancers handling the complete financial lifecycle — client onboarding, **auto-calculated 18% GST/TDS invoicing**, and Razorpay payment link generation; API documented via **Springdoc OpenAPI 3** with live Swagger UI.
- Implemented **event-driven architecture** using Confluent Kafka; heavy operations (PDF generation, email dispatch, AI analysis) offloaded to async consumers, keeping API response times non-blocking under load.
- Integrated **Groq AI (Llama 3.1-8B)** for financial insight generation — flags overdue risk and recommends pricing adjustments based on invoice history; prevented duplicate payment processing using **Redis SETNX idempotency** with 24h TTL on Razorpay webhook events.

DevPulse — Application Health Monitoring System

[GitHub ↗](#)

Java, Spring Boot, MySQL, Redis, WebSocket, JWT, Docker

Mar 2026 – Ongoing

- Built a backend monitoring system supporting app registration, live metric ingestion (CPU, memory, response time), and threshold-based alerting with **real-time WebSocket (STOMP)** broadcast and **Spring @Scheduled** health pinging.
- Integrated **Redis caching**, **Bucket4j rate limiting** (60 req/min), JWT auth, email alerts via JavaMailSender, and containerized the full stack with Docker Compose.

Certifications

SQL for Data Science — UC Davis, Coursera

Apr 2025

Java Full Stack Development — IBM, Coursera

Achievements

- HackWithIndia 3.0** — Shortlisted among top teams in an online hackathon with 2,000+ participants on Devfolio; built a Spring Boot-based fintech solution within a 36-hour sprint (2025).
- LeetCode** — Solved **100+ problems** spanning arrays, strings, trees, dynamic programming, and graph traversal; consistent focus on optimizing time and space complexity.
